

VUPLEX® PLASTIC CLEANER

Maintain high gloss excellence.

- > Specifically designed to clean, protect and maintain plastic surfaces that are used in many modern high gloss finishes
- > VuPlex® was designed for use within the demanding Aviation industry for the maintenance of expensive aircraft windows and delivers a fast, safe and effective solution to plastic maintenance
- > Most normal cleaning products can damage plastic, reducing it's lifespan considerably but not VuPlex®....

VuPlex® works well on.....

Composite materials and sanitary acrylics

Polished metals

Stonework, granite and marble

Painted surfaces

Glass and mirrors

DO NOT use paper towels. Only microfibre cloths or lint free cotton cloths should be used with VuPlex®

It cleans using ingredients that won't damage delicate high gloss surfaces. VuPlex® cleans a broad range of common household stains.

High gloss surfaces are particularly prone to attracting dust which can cause scratches. VuPlex® can help to solve this problem by controlling and reducing the amount of static on high gloss surfaces.

When new, some high gloss materials (acrylic co-polymers) are very soft when masking material is removed. VuPlex® accelerates the hardening process protecting the surface from the outset.

Together with increased surface hardness, VuPlex® also produces vastly improved scratch resistance by depositing a protective polymer film on the surface.

VuPlex® has the ability to fill fine micro scratches in acrylic materials giving a greater lustre on older acrylic materials.

Water and other contaminants are repelled from the surface, which is particularly important for stone and composite materials.

Directions for use:

Shake can well and spray on lightly

Wipe down with soft microfibre cloth

Reapply when cleaning is necessary
